## COMPANY NEWS

### New website offers easy access to machinery safety information

**Procter Machine Guarding has completely revised its website, which now offers far more to visitors looking for information about machine guarding or machinery safety in general.**

With a fresh new look and improved navigation, the website makes it easy to find the information required. In addition, the new site gives direct access to downloadable datasheets that were not available on the previous website.

One section of the site that has undergone considerable redevelopment is that relating to the Satech range of low-cost modular machine guarding. This now carries far more information, covering panels, posts, doors, bracketry and accessories. Versatile and economical, the Satech system will appeal to anyone using perimeter guarding, including end-user manufacturers, warehousing OEMs and automation line builders.

A popular section of the Procter website has always been the downloadable free guides. This has now been improved and offers visitors the chance to download a Risk Assessment Calculator, a Guide to Machinery Guarding Standards, a Machine Accident Investigation Kit, a Safety Distance Calculator and, the latest publication, a Guide to the New Machinery Directive.

The Procter Machine Guarding website contains a wealth of information and is a truly useful resource for machine builders, manufacturing engineers, and anyone with responsibility for machinery safety.

Visit the new site now at [www.machinesafety.co.uk](http://www.machinesafety.co.uk)

## **Note to editors**

**Procter Machine Guarding** is the UK's leading machinery guarding specialist. From its sites in Leeds and South Wales, Procter offers a comprehensive service to survey, design, manufacture and install machine guards nationwide. All guards are designed to comply with EC and HSE requirements and a Declaration of Conformity is issued on completion.
