

MACH 2008 - PREVIEW

Procter to distribute free machinery safety CD-Rom at MACH

Procter Machine Guarding will be on stand number 4499 at MACH 2008, which takes place at the NEC, Birmingham, from 21-25 April. Visitors to Procter's stand can request a free CD-Rom containing the latest versions of the company's popular machinery safety guides and utilities:

- Guide to Machine Safety Standards
- Risk Assessment Calculator
- Safety Distance Calculator
- Guide to the New Machinery Directive
- Machine Accident Investigation Kit

One of the highlights on Procter's stand will be a range of machine shop guards that have not previously been exhibited. Visitors can also take a close look at examples from the comprehensive yet cost-effective Satech modular perimeter guarding system.

Machine guarding specialists will be available throughout the five days to discuss bespoke guarding with engineers who are designing new machines or upgrading existing machines. All types of machinery can be catered for, including machine tools, special-purpose machines, assembly cells, conveyors and more.

Anyone wishing to make an appointment to speak with someone from Procter Machine Guarding at a specific time during the show should email guards@procterbedwas.co.uk

Note to editors

Procter Machine Guarding is the UK's leading machinery guarding specialist. From its sites in Leeds and South Wales, Procter offers a comprehensive service to survey, design, manufacture and install machine guards nationwide. All guards are designed to comply with EC and HSE requirements and a Declaration of Conformity is issued on completion.
